IC-Solutions Template Selection

Introduction:

In this document we outline a very large array of styles and schemes for your potential web site. This document is intended to allow you to develop your ideas on the look and feel of the web site. The templates shown here is a guide only, and custom modifications are expected. This can range from simple colour changes to the combination of ideas from multiple templates. If none of the templates here is exactly what you are looking for, feedback is appreciated and we can build you a more narrowed down list with the new specifications.

Requirements:

Once you select the look and feel that you want for you web site we must then modify the template to suit your application. In most cases this will involve replacing much of the graphics/photos on the site. We can source photos from other provides, although this can become very expensive if many photos must be replaced, and this does not offer a completely personalised site. The best option is if you can provide any photos from previous photo shoots that we can work with. This is something that will need to be discussed once a template has been selected.
